

SULTAN SULEIMEN

West Lafayette, IN | github.com/Muchos1Sulos | suleimes@purdue.edu | [linkedin.com/in/sultan-suleimen](https://www.linkedin.com/in/sultan-suleimen)

EDUCATION

Purdue University

Expected Graduation: 2029

B.S. in Robotics Engineering Technology, Sophomore

– GPA: 3.55 / 4.00

Course Work: IoT Systems, 3D Modeling, Mechanical Design & Prototyping, Robotics, Gear & Mechanism Design, Circuit Construction & Wiring, Embedded Systems

HARD SKILLS

Computer Languages: Python, Java, C++, HTML, CSS, MATLAB, Wiring framework

Tools: TensorFlow, Arduino hardware, Raspberry Pi, ESP32, SOLIDWORKS, Autodesk Fusion 360, Excel, PowerPoint, SketchUp, Siemens NX, CNC machine, RDWorks, Android Studio

Skills: Computer Vision, IoT, circuit design, 3D modeling, mechanisms, smart systems, Mecanum-drive bases, mechanical modeling

WORK EXPERIENCE

First Tech Challenge Robotics Team Bolt.m3

August 2023 – June 2025

Technician & 3D Modeler & Coder | Almaty, Kazakhstan

- Won Gold in the Connect Award at the 2025 New England Premier Event, USA.
- Used 2 one-wheeled GoBilda Odometers and the AdafruitBNO005 IMU in the Rev Hub for precise orientation monitoring, facilitating field-centric drive for our Mecanum drivetrain.
- Only team from CIS to fit 8 motors in a 40x32x32 drivetrain, therefore making first ever mecanum drivetrain in CIS that used belt system and gear ratios for our 8 motors.
- Coded in Android Studio the tele-op, and used the Road Runner library for autonomous games. Integrated all the robot movements in a joystick
- Donated over \$2,000 for robotics supplements and provided robotics tutoring in more than 10 orphanages and local schools across Almaty.

Purdue Civil Engineering Department

May 2026 – Present

Researcher's Assistant | West Lafayette, United States

- Selected as a Research Assistant investigating concrete used in roadway construction across the Indianapolis–West Lafayette–Chicago corridor.
- Participated in field sampling and laboratory testing of concrete specimens collected from active road construction sites.

Himmel Aluminium

May 2026 – August 2026

Building Engineer & 3D modeller | Almaty, Kazakhstan

- 3D modeled a new five-chamber aluminum window system from a 2D engineering sketch provided by the company's Main Technician; the design was subsequently released on the company's website.
- Selected to present the 3D model to the local mayor, representing the company's engineering and product development work.

PROJECTS & LEADERSHIP EXPERIENCE

TECH 120 Design & Innovation Competition

Jan 2026 – May 2026

Team Lead | ESP32, CNC machine, RDWorks, SolidWorks

- Selected as 1 of 5 team leads among 50 students; formed and led a 5-person team, coordinating technical development and teamwork.
- Designed and CAD-modeled a plastic-to-3D-printer-filament extrusion system and built/tested a working prototype using an ESP32, REV motor, hot-end, relay, and 24V power supply.
- Placed Top 10 among ~680 TECH 120 students across all sections.

JAS Technology

April 2022 – Present

Co-Founder | Autodesk Fusion 360, C++, ESP8266, LoRa, Blynk, Wiring, Arduino, Python

- Created one of the first smart drip irrigation systems originating in Kazakhstan.
- Sold over 50 products to local farmers and donated products to orphanages, nursing homes, and schools in Almaty.
- Created a GPS livestock locator and sold & donated GPS trackers across Kazakhstan and to villages in China, starting with a \$0 initial budget.

Robotics Tutor, Zertte Studio

May 2026 – August 2026

Tutor | Autodesk Fusion 360, Arduino, Python, Java, C++, C, Pitching, Presentation skills

- Selected by the Education Department of Almaty to teach 3D modeling and Arduino to 10 groups of teachers from across Kazakhstan.
- Mentored teachers in STEM education, helping teams achieve 1st and 3rd place at the National STEM Competition.
